Stanford University’s graduate school of education invites applicants to apply for our first Math & Science Education Summer Research Academy. College Freshman, Sophomores, & Juniors are invited to work on research projects examining how science and math education is taught...

Science and Mathematics Education are fields that are often overlooked by top science and math majors. To provide students insight about these fields, the National Science Foundation partnered with Stanford University to provide 15 top students with detailed training in these fields...

To provide students with access to contemporary research, students will work in cohort teams on projects in the SF Bay Area. These projects offer leading perspectives on science and mathematics education and will leave the participants with a detailed understanding regarding the fields...

The staff of the Gateways to STEM Program invites applications for the 2012 Stanford University Summer Math and Science Education Summer Research Academy. This residential program provides top African-American science and mathematics majors with an opportunity to train with leading Science and Math Educational Researchers. Students who are accepted for the program will work closely with leading researchers in STEM education. Each participant will receive daily instruction on innovative research methodologies and contemporary topics in science and mathematics education. We encourage applications from current college students who are majoring in math and science. For students interested in applying, please visit:
